RAN FIRST ENGINE.

ENGINEER TELLS OF TRIP WITH FAMOUS "ROCKET."

Stephenson's Locomotive Astonished the World in 1830, and Veteran Still Lives to Tell of the Experience.

The engineer who ran the famous "Rocket" of George Stephenson, the first passenger locomotive to draw a passenger train in the world, is alive, in good health, and celebrated his ninety-second birthday a few weeks ago at his home in Des Moines, Ia. Edward Entwistle is the name of the man who has this unique claim to distinction.

Entwistle was a lad not 16 years of age when Stephenson completed his plans, secured a charter for the railroad between Liverpool and Manchester, and his train was ready to run. Entwistle was recommended to Stephenson by no less a personage than the duke of Devonshire, whose steward informed his highness that Entwistle was the best mechanic in the shops.

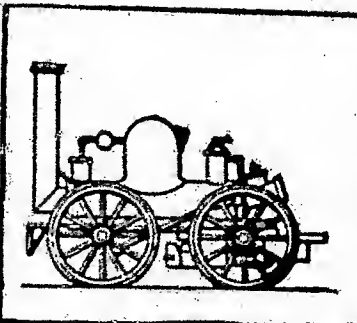

Mr. Entwistle, at his home, delights to live over the old days and tell the story of the preparations and the trial trip, the events of which are fresh in his mind from frequent iteration. His story is told in this manner:

"When the railroad was completed, September 13, 1830, was set for the date of the trial trip drawing passen-

thought at times we got as high as 29 miles an hour.

"I shall never forget that trial trip. Most of the world round about turned out to witness the trip, the line of railway being lined with people from end to end. Wagers were freely laid that the engine would not succeed—even that the trial would not be attempted.

"It was an historic, a nervous day for all of us. At the last moment it was learned that for some reason, now forgotten by me, the man who had been scheduled to run the engine on its first trip was not available. I do

not know whether he lost faith, whether he was temporarily ill or what had become of him. The Stephenson was dismayed; all was in readiness for the trip; they were sure the Rocket would succeed, but who was to be the throttle?

"It was at this juncture that I was recommended to Robert Stephenson as the most capable man—really, however, I was only a boy, being not yet 16 years of age. I had assisted in the construction—I understood the operation and I was enthusiastic. Stephenson subjected me to a minute examination and at last entrusted the engine to my care. I stepped into the cab, pulled the throttle, the steam

hissed, the wheels creaked and ground and amid the cheers of thousands upon thousands of people we started on our journey, slow at first, but soon more rapidly, until we were bowling pleasantly along the country with a continual accompaniment of cheers and shouts. Ah, that was a glorious day for the Stephenson—and for me!

"Two years I retained my post at the throttle of the Rocket, making daily trips between Liverpool and Manchester, a distance of 21 miles. One time I succeeded in making the trip in about 20 minutes, but that was too much like flying. A moderate speed was sufficient in those days.

"The work was hard, I was exposed day after day to the elements, and so after two years I asked to be relieved from the post. Mr. Stephenson was so well pleased with my services that as a special favor I secured a post as second engineer in one of the duke of Bridgewater's sailing vessels, where I remained for six years, and then I came to America to make this country my home."

ger cars. The train consisted of two double-decked coaches, each seating 18 persons, nine on the upper deck and nine below. The weight of the train was not quite ten tons. The average speed was 14 miles an hour, although it was not constant.

FAST TRAINS IN ENGLAND.

One Nonstop Run of Over 225 Miles in Four Hours Ten Minutes.

The most phenomenal and, in fact, the world's record nonstop runs for length and sustained high speed are made by the Cornish Riviera limited expresses, which daily run in each direction between London and Plymouth, 225 miles, without an intermediate stop, in four hours and ten minutes, says the Iron Trail.

When it is remembered that the last 52 miles of the run are over a winding switchback road, where grades of any steepness up to one in 40 abound, some idea will be formed of the difficulty task set to the locomotives.

The average speed of these trains between London and Exeter, 173 miles, is 57.5 miles per hour, and the same timing is also made by two other down expresses which daily run to this town without an intermediate stop.

Water is picked up from track troughs no less than three times by all these four trains, and the down Riviera limited detaches three independent slip coaches, one after the other, during the journey.

Before the new direct line to the west of England via Westbury was opened, the runs made by these two world famous trains were more astonishing still, as the distance covered by them daily without stopping was 215 miles, 20 miles more than at present, while the average booked speed for 122 miles was 58 miles per hour, including a severe attack at Bath, and a worse one through Bristol, four minutes being consumed by one and one-half miles of curved road through the latter town.

However, these heated expresses keep excellent time, and have proved so remunerative that they are also continued through the winter months, the time to Plymouth having been cut to four hours seven minutes with the new train, while the up limited now calls at Exeter.

An additional nonstop express has also been put on from Exeter, bringing the number of these 173-mile nonstop expresses on this one Riviera slip coach to four, in addition to the down Riviera limited with its 225-mile run.

World's Railroad Building.

The Railway Age reports 11,912 miles of railroad under construction in the United States. The Pacific states are building 2,500 miles of railway at present, the southwestern states 1,500 miles, the central states 1,000 miles, the Gulf and Mississippi valley states 1,250 miles, the south Atlantic states 1,250 miles, the middle Atlantic states 250 miles, and New England three miles.

Oxen Against Railroads.

In the Cape of Good Hope colony many of the short railroad branches and extensions do not pay, on account of ox wagon competition, says the Rhodesia Herald.

In the report for the year 1905, recently issued, the traffic manager of one of the lines reports in regard to a new 13-mile branch that as there was a very plentiful supply of wagons and an abundant supply of grass during the season ox wagon rates ruled low and the railroad secured little general traffic.

Care's Special Line.

Between St. Petersburg and Tarasov Solo there is a special railroad line, with a private station at each end, for the exclusive use of the imperial family. Every yard of it is constantly guarded and the car itself often drives the locomotive—of course, under the superintendence of the driver proper.

Put Blame on Government.

It is the custom of the Khonds in the Madras presidency of India to offer a buffalo in sacrifice in substitution for the human victims. But in doing so they make long apologies to the deity, explaining that they themselves would willingly make the customary sacrifice, but are prevented by the British government, on whose head they pray that any anger at their neglect of duty may be visited.
